A team of researchers at Tulane University School of Medicine are conducting a study to assess when the vaccine-generated antibodies take effect after someone receives the COVID-19 vaccination. This information is important to determine when an individual has full protection against COVID-19 after receiving the vaccination.

If you are at least one week away from receiving your vaccination, you may be eligible to participate in this important research study.

Participating in this study involves answering a few questions about your COVID-19 history and vaccination and providing small blood samples via a prick of your finger.

If you are interested in the study or have any questions, please contact the principal investigator, [Tony Hu](#), at tonyhu@tulane.edu.
